

Project 3: SQL Sales Analysis

➤ Introduction

In this project, I used SQL to analyze the Superstore sales dataset. The goal of this project was to answer business questions about sales, profit, customers, products, categories, regions, and discounts.

➤ Tools Used

SQL

SQLite

Superstore Dataset

➤ Dataset

The dataset contains sales records including order date, category, sub-category, product name, customer name, region, sales, profit, and discount.

➤ Business Questions Answered

1. What is the total sales amount?
2. Which category has the highest sales?
3. Which region has the highest profit?
4. What are the top 10 products by sales?
5. Are there any categories with negative profit?
6. What are the monthly sales trends?
7. What is the average discount?
8. Which sub-categories are most profitable?
9. Who are the top customers?
10. Which products are causing losses?

➤ Conclusion

This SQL analysis helped identify important business insights from the Superstore dataset. The business can use this information to understand sales performance, improve profit, identify top customers, and reduce losses from low-performing products.
