

Online Retail Sales Analysis Using Excel and Tableau

Project Overview

This project analyzes an online retail transaction dataset to identify sales trends, customer purchasing behavior, and high-value customers. The dataset was cleaned and transformed using Microsoft Excel and visualized in Tableau through an interactive dashboard.

Tools Used

- Microsoft Excel
- Tableau

Key Metrics Analyzed

- Revenue by Country
- Top 10 Customers by Revenue
- Monthly Sales Trends
- Customer Type Distribution
- Customer Spending Levels

Key Insights

1. Highest-Spending Group

VIP Customers generated the highest revenue and contributed significantly to total sales.

2. Lowest-Spending Group

Occasional Customers generated the lowest revenue and made fewer purchases than other customer groups.

3. Top Market

The United Kingdom generated the highest revenue and remains the most important market.

4. Customer Purchase Pattern

Sales increased during the final quarter of the year, with September through November showing the strongest performance.

5. Customer Concentration

A small number of customers generated a large portion of total revenue, highlighting the importance of customer retention.

Recommendations

1. Implement loyalty programs for VIP Customers.
2. Offer personalized promotions to Regular Customers.
3. Focus marketing efforts on high-performing countries.
4. Encourage Occasional Customers to increase purchase frequency.
5. Increase promotions during peak sales periods.
