

Sales Performance Dashboard – Project Summary

Project Overview

The Sales Performance Dashboard is an interactive Power BI project designed to analyze and visualize business sales data. The dashboard provides insights into sales trends, profitability, regional performance, and top-selling products.

Objectives

- Analyze overall sales performance.
- Track monthly sales trends.
- Evaluate profit generated by different product categories.
- Compare sales across regions.
- Identify top-performing products.
- Support business decision-making through data visualization.

Dataset Information

- Total Records: 9,994 sales transactions
- Fields: Order Date, Customer Information, Product Category, Region, Sales, Quantity, Discount, Profit

Dashboard Features

1. Monthly Sales Analysis
2. Profit by Category
3. Regional Sales Performance
4. Top 10 Products
5. Interactive Filtering

Tools & Technologies Used

Power BI Desktop, Microsoft Excel, Power Query, and DAX (Data Analysis Expressions).

Data Preparation Steps

1. Imported Excel data into Power BI.
2. Cleaned and transformed data using Power Query.
3. Removed duplicates and handled missing values.
4. Created DAX measures.
5. Developed interactive visualizations.

Key Insights

- Sales performance varies across months.
- Office Supplies generated strong profit.
- East region recorded strong sales performance.
- Top products contribute a significant portion of revenue.

Outcome

This dashboard provides a comprehensive view of business performance and demonstrates skills in data cleaning, data modeling, visualization design, and business intelligence reporting using Power BI.

Resume Project Entry

Developed an interactive sales analytics dashboard using Power BI and Excel. Analyzed 9,994 sales records, created dynamic visualizations, utilized Power Query for data transformation, and implemented DAX measures for KPI reporting.
